

# My Kitty Personal Configuration

Here are my personal adjustments to [Kitty](#). You may find it useful.

As of version 0.63.0.2 there is now a specific portable version. Not sure how it is different than just [adding the kitty.ini](#) file.

## kitty.ini

Here are the contents of my Kitty Configuration File. Copy the contents into notepad and save it to the directory where Kitty is running as the file "kitty.ini".

```
[KiTTY]
; Instead of storing in Windows Registry all information is kept in
directories
; Commands, Folders, Launcher, Sessions, Sessions_Commands and SshHostKeys.
savemode=dir

; Enables transparency, Windows XP and up only.
; Use CTRL-Up Arrow and CTRL-Down Arrow to change transparency.
transparency=yes

; Shows different icons per connection
icon=yes

[ConfigBox]
; Shows different icons per connection
height=25
```

## Changes to Default Settings

These changes are in order of importance to my everyday use.

**Category:** Window

**Lines of scrollback:** 20000
