## Graphics Design - Printing Photography

## Print

Most printshop (2016) print at 300 PPI so ideally $1800 \times 2400$ pixels prints $6 " \times 8$ ",

$$
\begin{aligned}
& 1800 / 300=6 " \\
& 2400 / 300=8 "
\end{aligned}
$$

What about DPI? That's for scanning in.
To do fancy collages, you may want to leverage existing templates from websites like Design Algow.
