

Mod_Proxy Tomcat

This article needs to be cleaned up.

Reverse Proxy Setup

```
LoadModule proxy_module modules/mod_proxy.so = proxy.load
LoadModule proxy_http_module modules/mod_proxy_http.so = proxy_http.load
LoadModule proxy_html_module modules/mod_proxy_html.so = proxy_html.load
```

proxy.load already enabled
proxy_http already enabled

sudo apt-get install libapache2-mod-proxy-html # which also enables it

```
# Reverse Proxy to app server start.
    ProxyRequests Off

    <Proxy *>
        Order deny,allow
        Allow from all
    </Proxy>

    ProxyPass /wiki/ http://www.breakitdown.ca:8080/wiki/
    ProxyPassReverse /wiki/ http://www.breakitdown.ca:8080/wiki/

    ProxyPassReverseCookieDomain www.supernaturalz.com
www.breakitdown.ca
    # Reverse Proxy to app server end.
```

Added www.breakitdown.ca to host file at 127.0.0.1 (what is in Confluence admin as ...)

Refernces

<http://www.apachetutor.org/admin/reverseproxies> - a bit techie, but the most in depth article I have found on reverse proxy.
