

Perl - Search Between HTML Tags

Find data between html tags

```
#!/usr/local/bin/perl
# multiliner.pl
use strict;
my $filename = shift;
open (FILE, "<", $filename) or die "Failed to read file $filename : $!
\n";
my $whole_file;
{
    local $/;
    $whole_file = <FILE>;
}
close(FILE);
while ($whole_file =~ m#\<ul id="poweredby"\>(.*?)\</ul\>#gs) {
    print $1 . "\n";
}
```

To execute,

```
perl multiliner.pl datafile.txt
```
