Flush DNS Mask to Apply Changes

When editing **/etc/lxc/dnsmasq.conf**, changes do not take effect right away.

So **first** shutdown all your containers (Aug 2016, there is an issue that lxc-net does not restart unless all containers are shut off). Then restart lxc-net,

```
# Tried this and it did noot work
http://seminar.io/2014/07/27/dns-resolution-for-lxc-in-ubuntu-trusty/
sudo service lxc-net stop
sudo service lxc-net start
```

The other option is to shutdown all containers and restart the host operating system.
