

Screens

Not using screens directly, see entry on [byobu](#).

In a nutshell screen is ...

Hmm... single-user is great but for multi-user it requires chmods which can be security vulnerabilities.

<http://packages.ubuntu.com/maverick/gems> - sounds like a good alternative... NOT, looks abandoned.

Back to screens, this looks good - <http://blog.bodhizazen.net/linux/shared-ssh-sessions-update-for-jaunty-ubuntu-904/> - original article <http://blog.bodhizazen.net/linux/shared-terminal-sessions-over-ssh/>

An alternative to screens is tmux. As I rarely use screens not sure if tmux is any better but this [versus article](#) might shine some light.

Hmm.. investigating, wemux a front-end to simplify tmux might be a good alternative... just verify the security.

Resources

<http://www.pixelbeat.org/docs/screen/> - looks good

http://www.roboguys.com/index.php?option=com_content&task=view&id=79&Itemid=47 - looks like a nice simple tutorial.
