

byobu

Byobu is a wrapper for screens that adds a status bar and a bunch of other functionality to the command line.

If you use byobu alot you can add it to your **.profile** file.

Some Uses for byobu

Share a Session

This can be accomplished with Screens but much easier with byub. The simplest model is to share the same account....

Basic Commands

byobu - will start or return to the last screen session.
